My SMS app confirms the details were sent	67

1.OBJECTIVES

- To create an app that allows the user to take a quiz of five questions.
- To demonstrate the concept of intents.
- To demonstrate the concept of passing data among activities.
- To demonstrate the concept of sending an SMS.

2.INTRODUCTION

The project was carried out to create a simple app that allows the user to enter their name and ID number. The user can then take a short quiz of five questions. At the end of the quiz the results are displayed on the screen as well as sent to the lecturer via SMS.

3.APPARATUS

The tools that were used in the development of this program are as follows:

- Android Studio
- Android Virtual Device emulator
- My Android phone
- Trello for task management
- draw.io
- Git and GitHub for version control

The full project repository can be found [here](#) on GitHub.

4.METHODOLOGY

a. Design Phase

I started the project by first designing all the activities. As per Android's best practices, the parent layout for all my activities is the constraint layout.

```
<androidx.constraintlayout.widget.ConstraintLayout>
```

b. Implementation Phase

In the beginning I was considering using a database to store all the question answers when the user moves to another question. This however proved itself a non necessary feature for the following reasons:

- Writing to and reading from a database every time a new activity is launched would not only be difficult to implement but also inefficient.
- There is no real need to store data permanently thus a database is redundant. Storing data in a data structure in memory is more efficient.

Initially I had planned to use an array to capture all the data that I would need to display at the end of the quiz.

This however came with it's own problems:

- When an array is declared, it's size has to be initialized. In consequent activities this was causing Null Pointer Exceptions because of index mismatches.
- Another problem with arrays is that you cannot dynamically add items to them.

These problems caused me to reconsider. An ArrayList proved itself to be the most appropriate data structure since it addresses both problems.

I switched to an ArrayList and added data to it as follows

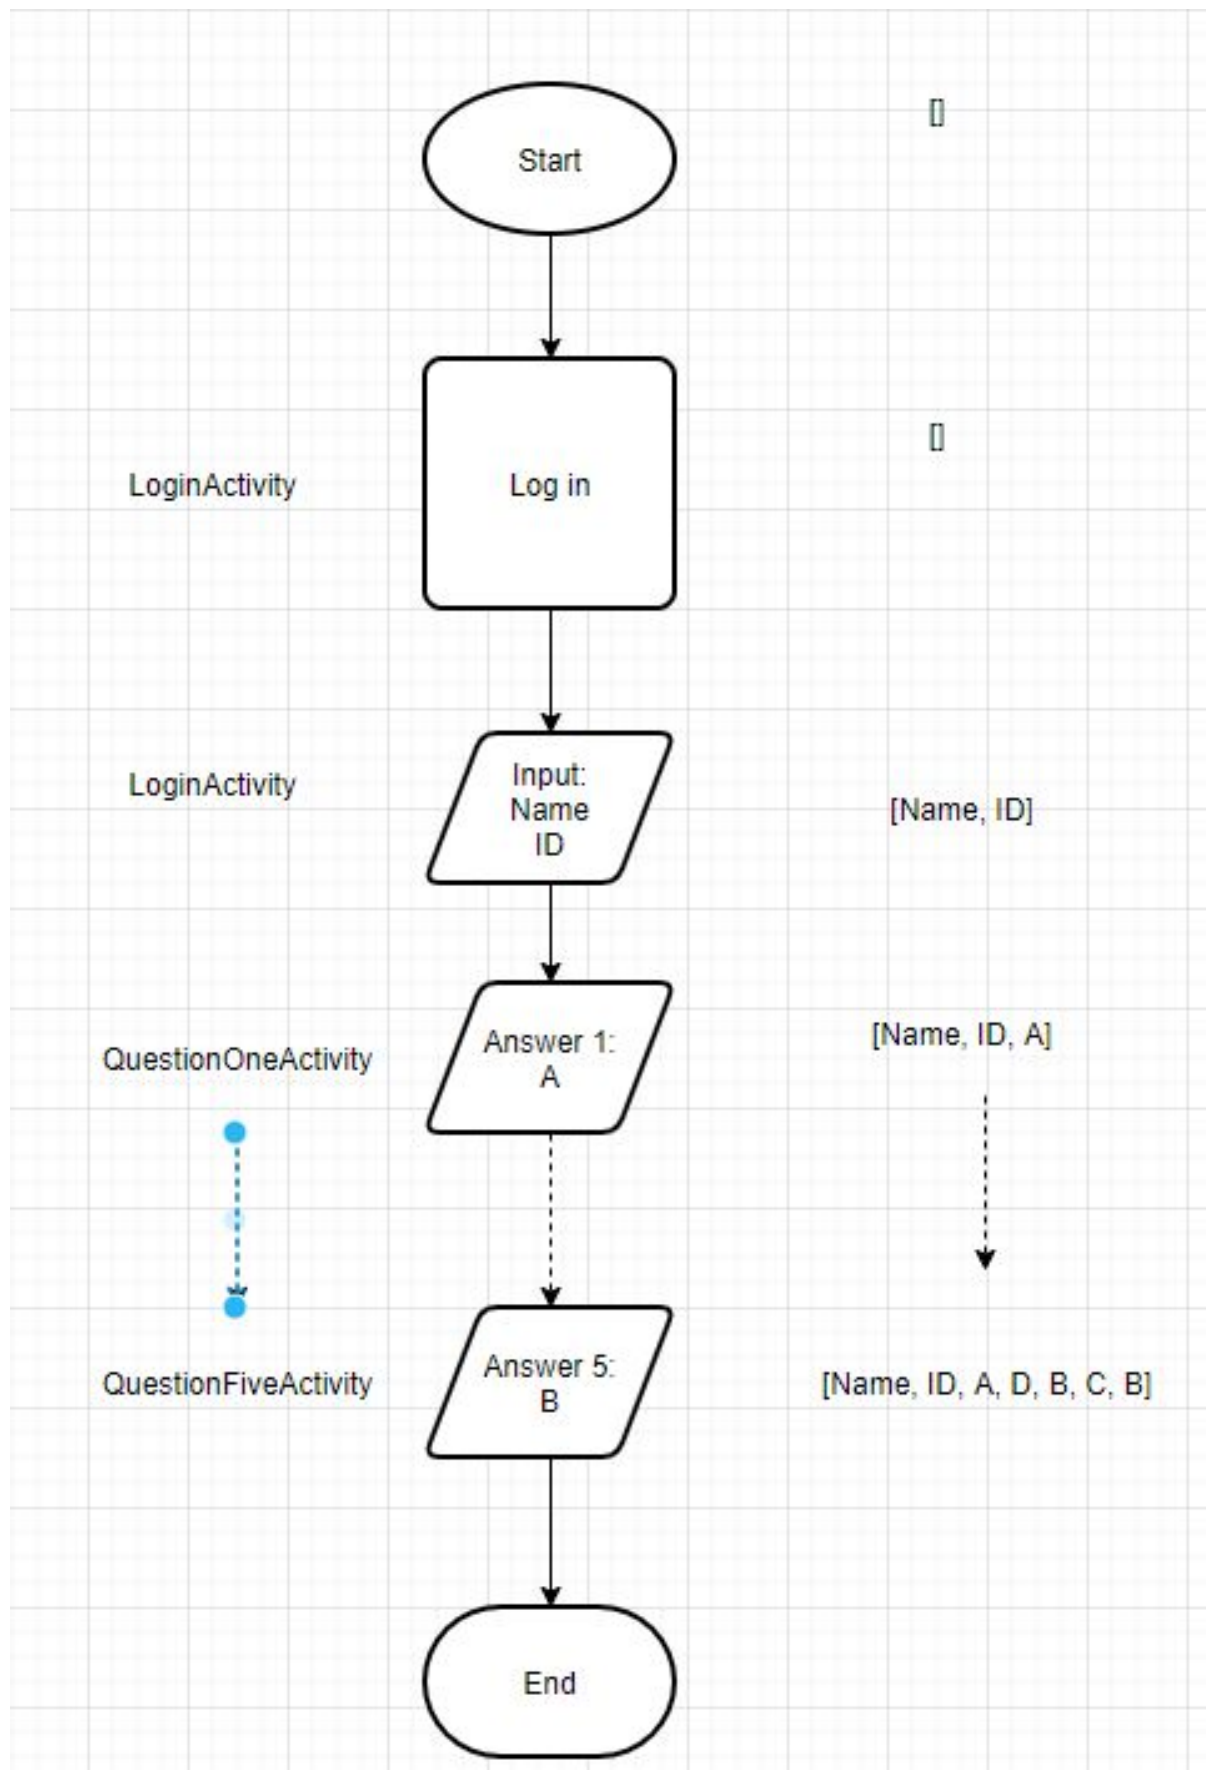

Fig 1

At every stage, I use intents to pass the ArrayList from one activity to the next.

4.ISSUES

In my testing I have come across one bug that has to do with the way I chose to store data. When the user goes to a previous activity after selecting an answer causes the ArrayList to be refreshed in memory. Thus it takes the value `null` and if the user tries to continue from there the app crashes.

A full list of all the issues can be found on the repository's [issue page](#).

5.CONCLUSIONS AND RECOMMENDATIONS

- I feel confident that I implemented both the functional and the non-functional requirements of this project to

the best of my ability. The app is able to capture a user's name, id and answers to the five questions.

Additionally, it can calculate the user's score out of five as well as the number of questions attempted and not attempted. All this data is displayed on the screen and sent to the lecturer's number.

- It could be improved by fixing the issue mentioned in the section above.

It would also be a good idea to give the user the option of sending the results to the lecturer upon completion. This alongside keeping track of the number of times the user has attempted the quiz would make great additions to the app.

6.APPENDIX

Code

AndroidManifest

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.eric.quiz">

    <uses-permission android:name="android.permission.SEND_SMS" />

    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportRtl="true"
        android:theme="@style/AppTheme">
        <activity android:name=".LoginActivity">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>

        <activity android:name=".QuestionOneActivity">
        </activity>

        <activity android:name=".QuestionTwoActivity">
        </activity>

        <activity android:name=".QuestionThreeActivity">
        </activity>
```

```
<activity android:name=".QuestionFourActivity">  
</activity>
```

```
<activity android:name=".QuestionFiveActivity">  
</activity>
```

```
<activity android:name=".ResultsActivity">  
</activity>  
</application>
```

```

A green mobile status bar at the top of the screen. On the right side, it contains icons for a battery, a signal strength indicator, a notification bell, a small square icon, and the text "61% 5:24 PM".

Quiz

The logo for United States International University-Africa. It features a stylized graphic on the left consisting of a blue triangle pointing right and a yellow triangle pointing left, meeting at a point. To the right of the graphic, the text "United States International University-Africa" is written in a blue serif font. Below this, the tagline "Education to take you places" is written in a smaller, black sans-serif font.

The image shows a mobile application interface for a quiz. At the top, there is a dark green status bar with icons for signal, battery, and time (5:25 PM). Below this is a green header bar with the word "Quiz" in white. The main content area has a light gray background. The title "IST 099 Exam. Question#2" is centered in black. Below the title, the question "Q2. When you draw a plan of a house, you would make use of the following software" is displayed. There are four radio button options: A. database, B. computer aided design (selected), C. computer graphics, and D. spreadsheet. At the bottom, there are three buttons: "PREVIOUS", "HOME", and "NEXT", all in purple.
